According to our (Global Info Research) latest study, the global Polymer Oxidation Inhibitors market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Polymer oxidation inhibitors refer to chemical substances that can inhibit or delay the oxidative degradation of polymer materials by oxygen or ozone in the atmosphere, thereby preventing material aging and prolonging service life. Antioxidants can be divided into main antioxidants and auxiliary antioxidants. Among them, main antioxidants can eliminate free radicals in the resin system, mainly aromatic amines and hindered phenolic compounds and their derivatives; auxiliary antioxidants can eliminate free radicals in the resin system. The hydroperoxides in the resin system are decomposed in time, mainly the organic compounds containing phosphorus and sulfur.
