Polymer Powder SLS Equipment refers to a type of additive manufacturing device that utilizes the Selective Laser Sintering (SLS) technology specifically for processing polymer powders. In this process, a high - power laser is precisely controlled to selectively sinter powdered polymer particles layer by layer according to a pre - programmed 3D model data. The laser fuses the polymer powder particles together at specific points, gradually building up a three - dimensional object. This equipment is widely used in various industries, such as aerospace, automotive, healthcare, and consumer products, to manufacture complex - shaped polymer parts with high precision, good mechanical properties, and relatively short production cycles.
