Polymer recycling additives are a type of functional additives specifically used to improve the performance of recycled polymer materials, aiming to improve their reprocessing performance and final product quality. These additives can enhance the melt fluidity, thermal stability, oxidation resistance and mechanical properties of the material, helping to offset the degradation of the polymer during the recycling process. In addition, they can also improve the UV resistance and color stability of recycled polymers, ensuring the appearance and performance of the products after recycling. They are widely used in the recycling of polyolefins, polyesters and other polymers, helping to achieve sustainable resource management.
