Polymer Reflective Polarizer is an optical film that can selectively reflect and transmit light with different polarization directions. This material is very important in display technology, lighting systems and other applications that require control of the polarization state of light. Here is some key information about polymer reflective polarizers:

Main features

High reflectivity and high transmittance: It has high reflectivity for light with a specific polarization direction and high transmittance for light with another polarization direction.

Lightweight and durable: Made of polymer materials, it is lighter and less prone to breakage than traditional glass substrates.

Cost-effectiveness: The cost of mass production is relatively low, suitable for a wide range of application scenarios.

Customizability: Its optical properties can be changed by adjusting the parameters in the manufacturing process to meet different design requirements.
