Abstracts

According to our (Global Info Research) latest study, the global Polymer Sliding Bearings market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

As the manufacturing industry continues to upgrade, the requirements for equipment performance are becoming higher and higher. Polymer sliding bearings will play an increasingly important role in high-end equipment manufacturing due to their good self-lubricating properties, low friction, and high wear resistance. At the same time, with the rapid development of new energy vehicles, robots and other industries, the application of polymer sliding bearings will also be further expanded. The increase in environmental awareness will also promote the development of polymer sliding bearings. Traditional sliding bearings are often lubricated with oil, which has problems such as oil leakage and environmental pollution. The polymer sliding bearing adopts a self-lubricating design and does not require refueling, which reduces environmental pollution and is in line with the development trend of green and environmental protection.
