According to our (Global Info Research) latest study, the global Polymeric Geomembranes market size was valued at USD 2668.1 million in 2022 and is forecast to a readjusted size of USD 3561.1 million by 2029 with a CAGR of 4.2% during review period.

Polymeric Geomembranes are membranes made of polymer materials, whose main components include polymers and geotextiles. This material has a variety of excellent properties, such as stable chemical properties, which can resist the threat of landfill leachate; low permeability, which can ensure that groundwater and rainwater seepage will not penetrate through the liner; stable UV resistance, which solves the problem of exposure to ultraviolet rays Problems that can be easily decomposed. In addition, it also has the characteristics of high strength, good self-sealing, large elongation, aging resistance, non-toxicity, and does not pollute the environment.

With the continuous improvement and optimization of Polymeric Geomembranes materials, they may be applied in more fields, such as water treatment, agriculture, construction, etc.
