According to our (Global Info Research) latest study, the global Polymeric Hydrolysis Stabilizer market size was valued at US\$ 179 million in 2024 and is forecast to a readjusted size of USD 313 million by 2031 with a CAGR of 8.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Polymeric hydrolysis stabilizer is an additive used in polymer materials, designed to prevent or slow down the hydrolytic degradation of polymers in moist environments. Unlike monomeric hydrolysis stabilizers, polymeric hydrolysis stabilizers exist in polymeric form, usually as high molecular weight compounds. They interact with or chemically bond to the polymer matrix, providing more durable protection against hydrolysis within the polymer structure. These stabilizers are particularly effective in enhancing the durability of plastics, coatings, fibers, and other polymer materials, especially in applications requiring long-term exposure to humid or aqueous environments.
