Abstracts

According to our (Global Info Research) latest study, the global Polymeric Sand market size was valued at US\$ 595 million in 2025 and is forecast to a readjusted size of US\$ 847 million by 2032 with a CAGR of 5.1% during review period.

In 2024, global polymeric sand production reached approximately 654,931 ton, with an average global market price of around USD 880 per ton. A factory gross profit of USD 220 per ton with 25% gross margin. A single line full machine capacity production is around 20,000 ton per line per year. downstream demand is concentrated in residential, commercial and municipal infrastructure. A homeowner uses polymeric sand to fill joints between concrete pavers on a new stone patio. It locks joints firmly, resists weed growth, and reduces maintenance. Polymeric sand is a mix of fine sand and special water-activated polymers that bind together when wet, creating a strong, durable, mortar-like substance to fill gaps between pavers, stones, or tiles, preventing washout, weed growth, and insect infestation for more stable and long-lasting hardscape surfaces.
