According to our (Global Info Research) latest study, the global Polymers for Implantable Medical Devices market size was valued at USD 1069.1 million in 2023 and is forecast to a readjusted size of USD 1372.8 million by 2030 with a CAGR of 3.6% during review period.

Implant medical device is a medical device manufactured to replace a missing biological structure, support a damaged biological structure, or enhance an existing biological structure. Medical implants are man-made devices, in contrast to a transplant, which is a transplanted biomedical tissue. The surface of implants that contact the body might be made of a biomedical material such as titanium, silicone, or apatite depending on what is the most functional.[1] In some cases implants contain electronics e.g. artificial pacemaker and cochlear implants. Some implants are bioactive, such as subcutaneous drug delivery devices in the form of implantable pills or drug-eluting stents.[2]
