Abstracts

The global Polymethyl Methacrylate (PMMA) Film and Sheet market size is expected to reach \$ 26604 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Polymethyl methacrylate (PMMA) film and sheets are high-transparency plastic sheets and films made from polymethyl methacrylate. They possess excellent light transmittance, weather resistance, and processing performance, and are widely used in the optical and decorative fields. Upstream components include MMA monomers, acetone cyanohydrin, additives, and modifying agents; downstream applications include advertising signage, automotive headlight covers, LCD backlight panels, building skylights, and electronic panels. The global average market price for PMMA film and sheets is \$3,023 per ton, with sales of approximately 6.2 million tons and a global production capacity of approximately 6.5 million tons. The industry profit margin is 18%.

The global PMMA film and sheet market maintained steady growth, primarily driven by automotive lightweighting, LED lighting upgrades, and consumer electronics display applications. High-transmittance, UV-resistant, and weather-resistant products saw stable demand in outdoor advertising and architectural lighting, while high-optical-grade materials continued to be upgraded in liquid crystal displays and light guide plates. The expansion of new energy vehicle lighting and automotive displays created incremental growth opportunities for high-performance PMMA. Asia, particularly China, has become a major global production and consumption market, with large-scale production intensifying price competition, but profit margins for high-end optical-grade and functionally modified products remained stable. In the future, the industry will move towards high-value-added, environmentally friendly, and recyclable materials, while strengthening its differentiated competitive strategy compared to materials such as PC.
