## Abstracts

According to our (Global Info Research) latest study, the global Polyolefin Elastomer Leather (POE) Leather market size was valued at US\$ 2058 million in 2025 and is forecast to a readjusted size of US\$ 3070 million by 2032 with a CAGR of 5.9% during review period.

POE synthetic leather is a high-performance soft synthetic leather made primarily from polyolefin elastomers through processes such as calendering, extrusion, coating, and foaming. It focuses on downstream applications including automotive interiors, footwear, furniture, and bags. The core attributes of the product include flexibility, abrasion resistance, weather resistance, and environmental friendliness. Key specifications typically range from 0.3 to 1.2 millimeters in thickness, 0.9 to 1.2 grams per cubic centimeter in density, and a tear strength of 30–35 N/mm. Its primary function is to replace natural leather and traditional PVC/PU synthetic leather, offering excellent processability and long-term stability. The research scope covers various forms such as coated leather, foam leather, and calendered leather, with manufacturing processes including raw material blending, extrusion molding, calendering and composite, and surface treatment technologies. In 2025, the global POE synthetic leather industry is expected to have an average gross margin of 28–35% and an average ex-factory price of 4–10 USD per square meter.

The POE synthetic leather industry chain encompasses upstream polyolefin elastomer supply, midstream processing and leather manufacturing, and downstream applications in automotive interiors, footwear, furniture, and bags. Increasing domestic production of raw materials enhances cost stability and competitiveness for midstream manufacturers. Advanced processes including extrusion, calendering, coating, and

foaming improve product performance and differentiation. Diverse downstream demand drives market expansion, with automotive interiors and premium footwear serving as key growth drivers. Environmental and energy-saving policies worldwide promote the replacement of traditional PVC and PU materials with sustainable synthetic leather, encouraging green manufacturing and the use of recyclable materials. Companies are actively investing in capacity expansion, new production lines, mergers, and technological partnerships, which enhances market concentration. Regional supply chain shifts are evident, with Asia, North America, and Europe acting as main production and consumption hubs. Capital expenditures focus on capacity improvement, process innovation, and development of eco-friendly products. Technological innovation and upgraded downstream demand drive product diversification, with coated, foam, and calendered leather categories showing significant growth potential. Lightweight vehicles and premium consumer goods support sustained growth in automotive interior and footwear markets, while furniture and bag segments expand steadily. Competitive dynamics are dominated by mid-to-high-end brands focusing on product differentiation and added value. Overall market prospects remain positive, with steady growth expected in the coming years, particularly in environmentally friendly materials and high-performance applications.
