Polyolefin Graft Copolymers are modified polymers created by chemically attaching functional monomers onto the backbone of polyolefins, such as polyethylene or polypropylene, through a process known as grafting. This modification introduces new properties, such as improved adhesion, compatibility with other materials, and enhanced chemical reactivity, without significantly altering the original polymer's mechanical properties. These copolymers are widely used as compatibilizers in polymer blends, coupling agents in composites, and adhesion promoters in coatings and packaging, making them valuable in industries like automotive, construction, and consumer goods.
