Polyolefin recycling additives are a type of functional additives specifically used to improve the performance of recycled polyolefin materials (such as polyethylene and polypropylene), aiming to improve their reprocessability and physical properties. These additives can enhance the melt fluidity, oxidation resistance and mechanical properties of recycled materials, making them easier to shape and use during reprocessing. At the same time, polyolefin recycling additives can also improve the thermal stability and UV resistance of materials, ensuring the quality and durability of recycled products in practical applications, thereby promoting the sustainable use of plastics.
