## Abstracts

As one of the five major engineering plastics, polyphenylene ether (PPE) resin has good flame retardancy, high temperature resistance, electrical insulation, dimensional stability and excellent physical and mechanical properties. The long-term use temperature range of PPE is  $-127\sim 121^{\circ}\text{C}$ , and it has excellent dimensional stability and outstanding electrical insulation under long-term load. Therefore, it is widely used in the electronic and electrical industry, automobile industry, industrial machinery and surgical medical equipment. PPE has shortcomings such as poor processing performance and poor impact resistance. In order to improve its processing performance, researchers often combine PPE with polystyrene (PS), polyamide (PA), and polybutylene terephthalate (PBT). mix. Blending modification improves the processing properties of PPE, but also reduces its temperature resistance and flame retardancy to a certain extent. Flame retardants are often added to commercial PPE modified materials to improve their flame retardant properties.

According to our (Global Info Research) latest study, the global Polyphenylene Ether Resin Raw Powder market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The global chemical industry is part of the global economic development, and the cyclical economic development envelopes the global chemical industry. In recent years, global economic growth has slowed down, and the growth rate of the chemical industry has also gradually slowed down. The development of emerging economies such as China and India has continued to promote the global chemical industry to maintain a certain development trend in the past few years. In the future, these economies will continue to drive the chemical industry market forward with their large population base

and strong domestic demand growth. In addition to the influence of the geopolitical characteristics of the Middle East, the shale gas industry in the United States among developed countries has become the biggest variable in recent years, driving the strong development of the U.S. chemical industry.
