According to our (Global Info Research) latest study, the global Polyphenylene Sulfide (PPS) Separator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

PPS separator, also called PPS fabric separator, is a separator cloth made of PPS fiber through weaving, spunlace and other processes. The separator is a thin film used to separate the positive and negative poles during electrolysis reactions to prevent energy loss from direct reactions in the electrolytic cell. In the structure of lithium batteries, the separator is one of the key inner components. The performance of the separator determines the interface structure, internal resistance, etc. of the battery, which directly affects the capacity, cycle, and safety performance of the battery. Excellent separators play an important role in improving the overall performance of the battery.
