Abstracts

According to our (Global Info Research) latest study, the global Polyphenylene Sulfide Thermal Conductive Pipe market size was valued at US\$ 276 million in 2025 and is forecast to a readjusted size of US\$ 345 million by 2032 with a CAGR of 3.3% during review period.

In 2025, the global production volume of polyphenylene sulfide thermal conductive pipe reached 17,005 tons, with an average selling price of 15,750 USD per ton. The global annual production capacity of polyphenylene sulfide thermal conductive pipe is approximately 25,000 tons, and the gross profit margin is around 21.25%.

Polyphenylene sulfide thermal conductive pipe is a type of thermal conductive pipe made from polyphenylene sulfide (PPS) material. PPS is a high-performance engineering plastic with good thermal conductivity and high-temperature resistance. Polyphenylene sulfide thermal conductive pipe is typically manufactured in the form of composite materials, where thermally conductive fillers such as aluminum oxide and silicon oxide are added to the PPS matrix. These fillers possess high thermal conductivity and can enhance the thermal performance of PPS thermal conductive pipes. PPS thermal conductive pipes exhibit good thermal conductivity, high-temperature resistance (capable of withstanding temperatures above 200°C), chemical corrosion resistance, and mechanical strength, while also featuring a low coefficient of thermal expansion and excellent electrical insulation properties. The upstream raw materials for polyphenylene sulfide thermal conductive pipe include PPS (polyphenylene sulfide) and other thermally stable epoxy/aromatic polymer matrices, fluorinated fillers, surface modifiers, and other base materials. The midstream consists of polyphenylene sulfide thermal conductive pipe manufacturers, while the downstream mainly covers fields such as petrochemicals, wastewater treatment, and flue gas waste

heat recovery.

The current market for polyphenylene sulfide thermal conductive pipe is in a phase where steady growth and high-end application expansion proceed in parallel, primarily driven by the sustained demand for heat exchange materials with high-temperature resistance and corrosion resistance in sectors such as chemicals, environmental protection, and energy. As a high-performance engineering plastic matrix composite, polyphenylene sulfide thermal conductive pipe demonstrates unique advantages in harsh operating conditions such as flue gas waste heat recovery, wastewater treatment, and heat exchange in strong acid and alkali media, owing to its excellent thermal conductivity, long-term thermal stability, and chemical inertness. With continuously increasing requirements for industrial energy conservation and consumption reduction, as well as tightening environmental standards, the market is pushing products toward higher thermal conductivity, better processability, and longer service life. Overall, this market is driven by a dual engine of rising technical barriers and accelerating import substitution.
