According to our (Global Info Research) latest study, the global Polypropylene Foams market size was valued at USD 981.2 million in 2023 and is forecast to a readjusted size of USD 1219.8 million by 2030 with a CAGR of 3.2% during review period.

Polypropylene is a thermoplastic polymer which can be readily formed by catalytic polymerization of propylene. In foam form it is used for various applications such as packaging, automobile, construction, electrical and electronics, and medical industries.

The Asia-Pacific region is expected to witness the highest growth rate in the polypropylene foams market, in terms of value and volume, from 2016 to 2021. In recent years, the demand for automotive and packaging applications has increased in the region due to the increasing population and rising disposable incomes, thus driving the need for polypropylene foams in the region. Polypropylene foams are leading the market as these foams are totally recyclable. With the superior properties, polypropylene foams enable the reduction of CO2 emissions. Due to the outstanding mechanical properties of polypropylene foams, they can be used over and over again for several years, even under extreme climatic conditions. The strong demand for high end polypropylene foams in the automotive sector from emerging nations and recuperating developed nations is expected to drive the growth of this market in the future.
