Abstracts

Polypropylene is a thermoplastic polymer which can be readily formed by catalytic polymerization of propylene. In foam form it is used for various applications such as packaging, automobile, construction, electrical and electronics, and medical industries.

Scope of the Report:

This report focuses on the Polypropylene Foams in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Asia-Pacific region is expected to witness the highest growth rate in the polypropylene foams market, in terms of value and volume, from 2016 to 2021. In recent years, the demand for automotive and packaging applications has increased in the region due to the increasing population and rising disposable incomes, thus driving the need for polypropylene foams in the region. Polypropylene foams are leading the market as these foams are totally recyclable. With the superior properties, polypropylene foams enable the reduction of CO₂ emissions. Due to the outstanding mechanical properties of polypropylene foams, they can be used over and over again for several years, even under extreme climatic conditions. The strong demand for high end polypropylene foams in the automotive sector from emerging nations and recuperating developed nations is expected to drive the growth of this market in the future.

The worldwide market for Polypropylene Foams is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
