Polypropylene Homopolymer Resin is a thermoplastic polymer formed by the polymerization of propylene monomers. Since it is composed of a single propylene monomer, it is called a homopolymer. This resin is known for its high rigidity, high melting point and good chemical resistance. It is resistant to heat, corrosion and bending, and can maintain excellent mechanical properties. Polypropylene homopolymer also has a low density, making it a lightweight but strong material that is widely used in the manufacture of various consumer and industrial products. It is commonly used in processes such as injection molding, blow molding, and extrusion molding, and can be used in the production of packaging materials, automotive parts, household appliance housings, medical devices, fiber products, etc.
