Meltblown polypropylene (PP) material is a high-performance polypropylene resin specially used in the meltblowing process. The meltblowing process is a non-woven fabric production technology that forms ultra-fine fibers and deposits them on the receiving net by spraying high-temperature molten polymer resin through a fine nozzle at high speed, and finally makes a fiber material with special structure and performance. Meltblown polypropylene material has excellent chemical resistance, weather resistance, antistatic and filtration efficiency. It is an important raw material for the production of high-efficiency air filtration materials, medical protective equipment (such as masks), thermal insulation materials and other products. Its high melt fluidity and good spinnability make meltblown polypropylene material perform well in the meltblowing process and can meet the needs of high-performance fiber materials in different fields.
