## Abstracts

According to our (Global Info Research) latest study, the global Polypropylene (PP) Nonwoven Fabric market size was valued at USD 14350 million in 2023 and is forecast to a readjusted size of USD 19660 million by 2030 with a CAGR of 4.6% during review period.

PP nonwoven fabric is a thermoplastic material with excellent comprehensive performance; moreover, it is small in density, easy to produce and has low production costs. However, it also has some defects, such as a low melting point, low thermal deformation temperature, poor creep-resistant performance, poor dimensional stability, low temperature brittleness, etc.

On the other hand, PP nonwoven fabric itself is resistant to erosion by mildew, but it cannot directly kill it. Furthermore, its side-chain polymers have flexible molecule chains and are non-polar, with the latter attribute making it difficult to blend with other polymers, and the weak molecule combination making its heat resistance poor. Thus, in order to expand the functions of PP nonwoven fabrics, it is necessary to modify and process it.

Global Polypropylene (PP) Nonwoven Fabric main players are AVINTIV, Kimberly-Clark, First Quality, Toray, etc. Global top four manufacturers hold a share over 20%. China is the largest market, with a share above 35%.
