Polystyrene latex spheres are synthetic polymer microspheres made from polystyrene, typically used in research and industrial applications due to their uniform size, stability, and versatility. These spheres are often functionalized with surface groups like carboxyl (-COOH) or amino (-NH₂) to facilitate chemical or biological conjugation. Their applications span immunodiagnostics, calibration standards, drug delivery systems, bioseparations, and material science. Polystyrene latex spheres are available in a range of sizes, from nanometers to micrometers, tailored to meet specific functional needs. Most commonly, they are supplied in liquid dispersion to ensure uniformity and prevent aggregation, making them ideal for precision-dependent processes.
