According to our (Global Info Research) latest study, the global Polystyrene Resin Recycling market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. Polystyrene resin recycling refers to the process of collecting and processing waste polystyrene products, such as foam packaging materials, disposable tableware, and insulation boards, into reusable resins. Polystyrene is a thermoplastic polymer commonly used in consumer products, which is lightweight, durable and has excellent insulating properties. During the polystyrene resin recycling process, collected waste is cleaned, sorted, shredded, and melted down to create new raw materials. Recycled polystyrene resins can then be used to produce various new products, including but not limited to picture frames, garden nursery trays, office supplies, and other consumer goods.
