## Abstracts

According to our (Global Info Research) latest study, the global Polysulfide Sealants for Insulating Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Polysulfide sealants are a type of elastomeric sealant used for sealing insulating glass units (IGUs). They are made by reacting a liquid polysulfide polymer with a curing agent, which produces a viscous, rubbery compound that can be applied to the edges of glass panes.

Polysulfide sealants have several advantages over other types of sealants, such as silicone and polyurethane. They have excellent adhesion to glass and metal surfaces, good chemical resistance, and can withstand exposure to sunlight and weathering without breaking down. They also have a low modulus of elasticity, which means they can accommodate the movement of the glass panes without breaking or losing their seal.

Polysulfide sealants are widely used in the construction industry for sealing IGUs in windows, doors, and curtain walls. They are also used in the automotive and aerospace industries for sealing windshields, windows, and other glass components. In addition, polysulfide sealants are commonly used in the marine industry for sealing boat windows and hatches, as they have excellent resistance to water and salt spray.

Overall, the polysulfide sealants market for insulating glass is expected to continue to

grow due to increasing demand from the construction and transportation industries. New formulations are being developed to meet changing industry requirements, such as improved thermal performance and reduced volatile organic compounds (VOCs).
