Abstracts

The global Polytetrafluoroethylene Anti-dripping Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The early anti-dripping agents were chlorinated polyethylene, silicone rubber and other products. Due to the problems of environmental protection, operability and migration, they were gradually replaced by high molecular weight polytetrafluoroethylene (PTFE) and became the mainstream of the market.

PTFE Anti-dripping agent is mainly used in plastic materials that require flame retardant grade up to V0. It can prevent melting dripping and improve flame retardant performance.
