According to our (Global Info Research) latest study, the global Polytetrafluoroethylene Dispersion Resin market size was valued at US\$ 681 million in 2024 and is forecast to a readjusted size of USD 996 million by 2031 with a CAGR of 5.4% during review period.

Polytetrafluoroethylene Dispersion Resin is a type of resin material based on polytetrafluoroethylene (PTFE), prepared into a dispersion system through special processes, which possesses good thermoplasticity and processability. It is typically produced by copolymerizing tetrafluoroethylene with perfluoropropyl vinyl ether, inheriting the excellent properties of PTFE such as corrosion resistance, electrical insulation, self-lubrication, and non-stick surface characteristics, while also featuring good thermoplastic processing properties suitable for various molding techniques like injection molding and extrusion. It is widely used in the manufacturing of wire and cable insulation sheaths, corrosion-resistant linings for chemical equipment, filters, and more.
