Abstracts

Polyurethane consists of organic components connected by urethane links. The majority of polyurethanes available are thermosetting polymers that do not melt at high temperatures. Polyurethane is conventionally utilized and is produced with the help of a polyol and di or polyisocyanate.

Polyurethane additives are the chemical substances that are used in small quantities to enhance the properties of foams, adhesives, sealants, coatings, elastomers, and binders.

Scope of the Report:

This report focuses on the Polyurethane Additives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
