Abstracts

Polyurethane bearings are bearings made primarily of urethane resin (polyurethane). These bearings reduce friction between mechanical parts and support rotating shafts, enabling smooth rotation and precise motion. Polyurethane bearings are known for their high wear resistance and longevity, maintaining performance over extended periods. They are also lightweight, contributing to reduced component weight and improved energy efficiency. With a smooth surface and low friction operation, they enable efficient movement of moving parts.

Chemically stable, polyurethane bearings are suitable for corrosive environments but have a lower load-carrying capacity compared to metal bearings, necessitating careful design and selection.

According to our (Global Info Research) latest study, the global Polyurethane Bearings market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
