Abstracts

The global Polyurethane Board Coated Felt market size is expected to reach \$ 1748 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of Polyurethane Board Coated Felt was approximately 735 million square meters, with an average global market price of around USD 1.5 per square meter. The gross margin of major manufacturers in the industry was generally in the range of 18% to 32%.

Polyurethane Board Coated Felt is a functional reinforcing material used as a surface facing for PU/PIR polyurethane insulation boards. It is typically made from glass fiber mat, polyester fiber felt, or composite fiber felt as the base material, and is processed with inorganic mineral coatings, organic latex coatings, or composite coating systems. The product can improve the surface flatness, dimensional stability, tensile strength, flame retardancy, weather resistance, and downstream lamination adaptability of insulation boards. It is an important surface material for rigid polyurethane foam boards, PIR boards, and related sandwich panels.

The upstream of Polyurethane Board Coated Felt mainly includes glass fiber, polyester fiber, nonwoven substrates, mineral fillers, latex resins, flame retardants, additives, and coating equipment. The midstream mainly involves substrate forming, binder application, coating, drying, winding, and slitting. The downstream is mainly concentrated in construction, cold chain, pipeline, and other insulation fields, with demand driven by building energy efficiency requirements, stricter fire safety standards, and the increasing penetration of PU/PIR insulation boards.

This report studies the global Polyurethane Board Coated Felt production, demand, key manufacturers, and key regions.
