Abstracts

According to our (Global Info Research) latest study, the global Polyurethane Catalysts market size was valued at USD 1656.2 million in 2023 and is forecast to a readjusted size of USD 2463.7 million by 2030 with a CAGR of 5.8% during review period.

Polyurethane Catalyst can be divided into two broad classes: gelling catalysts and blowing catalysts. Gelling catalysts are more selective to catalyzing the reaction of the isocyanate with hydroxyl groups, whereas blowing catalysts are foaming catalysts; Blowing catalysts are more selective to catalyzing the reaction of the isocyanate with water to produce foam. When formulating a polyurethane foam system, it is important to have the correct ratio of gelling and blowing catalysts. If the ratio of gelling and blowing catalysts is incorrect, the foam will either lack physical integrity, or will be too dense.

Global core polyurethane catalysts manufacturers include Huntsman, Umicore etc. The top 5 companies hold a share about 50%. Europe is the largest market, with a share about 28%, followed by North America and Asia Pacific with the share about 23% and 18%. In terms of product, tertiary amine catalyst is the largest segment, with a share over 65%. And in terms of application, the largest application is foam rubber, followed by coating and glue adhesives.
