According to our (Global Info Research) latest study, the global Polyurethane Coatings For Wind Power market size was valued at US\$ 260 million in 2024 and is forecast to a readjusted size of USD 378 million by 2031 with a CAGR of 5.6% during review period.

The full name of polyurethane is urethane resin, and its molecule is characterized by a urethane bond (-NH-CO-). Polyurethane coatings use polyurethane resin as the main film-forming substance, which has excellent mechanical properties, such as Flexibility, abrasion resistance and strength. It is the mainstream of wind power protective coatings.

According to the Global Wind Report 2023 released by the Global Wind Energy Council, by 2024, the newly installed capacity of global onshore wind power will exceed 100GW for the first time; by 2025, the newly installed capacity of global offshore wind power will also reach 25GW. In the next five years, the newly added grid-connected capacity of wind power will reach 680GW. The report also shows that the United States and Europe may experience a supply bottleneck of wind turbines and components in 2025. It recommends that national policymakers take immediate action to increase investment in supply chains to meet their rapid growth in demand and avoid supply chain bottlenecks hindering the development of wind power. In addition, according to Wood Mackenzie statistics, China is the largest and fastest-growing market for wind power generation in the world, accounting for more than half of the market share. Data from the National Energy Administration of China also shows that China's installed wind power capacity ranks first in the world, with a capacity of nearly 400 million kilowatts.
