Abstracts

The global Polyurethane Cold Storage Board market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polyurethane cold storage panels use lightweight polyurethane as the inner material of the cold storage panels. The advantage of polyurethane is that it has very good thermal insulation properties. The exterior of the polyurethane cold storage panels is made of color steel plates and stainless steel plates. The advantage of this is to prevent the cold storage panels from being damaged by internal and external factors. The large temperature difference leads to the spread of temperature, which makes the cold storage more energy-saving. It can have a refrigerator-like insulation effect, reduce electricity consumption and improve refrigeration efficiency.
