Abstracts

Polyurethane dispersions are materials that are used as binders and consist of water and a dispersed plastic that belongs to the polyurethane class of chemicals.

Polyurethane is an important material that is used in paints and coatings. It consists of water and a dispersed plastic that belongs to the polyurethane class of chemicals.

Polyurethanes are mainly used as binders in various applications. They are also used as a raw material in the production of various technology products.

Scope of the Report:

This report focuses on the Polyurethane Dispersions in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The water-based PUDs are projected to be the largest and fastest-growing type of polyurethane dispersions between 2018 and 2023. The water-based PUDs are of great importance due to their extraordinary characteristics of containing lower levels of volatile organic content (VOC). Further, water-based PUDs are versatile and environmentally friendly coating materials that are available in a wide range of film hardness and solid content.

Asia-Pacific, being the largest market for polyurethane dispersions is also projected to register the high growth market, in terms of value between 2018 and 2023. Accelerating demand from end-use industries such as coatings, leather production, adhesives in Asia-Pacific is driving the growth of the polyurethane dispersions market. Tremendous development in infrastructure and increasing demand of coatings and adhesives in various end-use industries such as automobile, textile, and leather is expected to drive the PUDs market in this region.

The worldwide market for Polyurethane Dispersions is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
