Abstracts

According to our (Global Info Research) latest study, the global Polyurethane Elastomer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Polyurethane elastomer is a class of polyurethane material that has the characteristics of rubber. Being a polyurethane, it is a polymer derived from the reaction between a molecule with an isocyanate ($R-N=C=O$) functional group and a molecule with multiple alcohol groups ($R-OH$), called a polyol. The choice of isocyanate and polyol are what makes one polyurethane elastomeric rather than another type of polyurethane.

Manufactured materials and coatings made from Polyurethane elastomer are available. Besides being highly elastic, Polyurethane elastomers tend to have great abrasion resistance, tear strength, chemical resistance and wide temperature compatibility. Coatings are typically used to block moisture, which in certain circumstances can lead to detrimental effects such as corrosion.

PU elastomers are majorly used in the footwear application for a perfect combination of ergonomics, microclimate, and sensation to deliver most comfortable experience to consumers. High abrasion resistance, light weight, and excellent long-term mechanical properties are preferable for hardwearing shoe soles. In addition, the growth in demand for PU elastomers is in response to its physical properties, such as enhanced resiliency, high mechanical strength, heat resistance, lower shrinkage, high filler capacity, durability and softness, resistance to hydrolysis, high rigidity, and resistance to chemicals. Low-density compact PU elastomers are used especially for mid-soles and outer soles.

The Global Info Research report includes an overview of the development of the Polyurethane Elastomer industry chain, the market status of Footwear (Thermoset PU Elastomers, Thermoplastic PU Elastomers), Automotive & Transportation (Thermoset PU Elastomers, Thermoplastic PU Elastomers), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Polyurethane Elastomer.
