Polyurethane expanding spray foam is a material widely used in various industries such as building insulation, cold chain logistics, automobile manufacturing, and furniture manufacturing. It boasts excellent thermal and acoustic insulation properties, as well as outstanding adhesion and compressive strength. Isocyanates and polyols, as its primary components, are mixed in precise proportions under high pressure and then sprayed at high speed through a spray gun. Once sprayed, they immediately begin to react and expand, forming foam that rapidly solidifies into the required foam layer.
