The global Polyurethane Fan Blade market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polyurethane fan blades are referred to as PU fan blades for short, and refer to fan blades made of polyurethane as raw materials. Fan blades are one of the important components of wind turbines, accounting for 20% of the total cost of the fan, and their quality has a direct impact on the stability of the performance of the fan. Compared with traditional epoxy composite blades, polyurethane fan blades have the advantages of stronger mechanical properties, better fatigue resistance, lower production costs, higher durability, lighter weight, and faster infusion and curing speeds. The operation requirements of wind turbines in the environment of ultra-high altitude, high power and harsh weather conditions.
