## Abstracts

According to our (Global Info Research) latest study, the global Polyurethane Thermoplastic Elastomer market size was valued at USD 35370 million in 2023 and is forecast to a readjusted size of USD 50000 million by 2030 with a CAGR of 5.1% during review period.

Polyurethane thermoplastic elastomer is a (AB)<sub>n</sub> type block linear polymer, where A is a high molecular weight (1000~6000) polyester or polyether, B is a glycol containing 2~12 linear carbon atoms, AB<sub>n</sub> The chemical structure between the segments is diisocyanate. This elastomer is cross-linked through intermolecular hydrogen bonds or light cross-linking between macromolecular chains. As the temperature increases or decreases, these two cross-linked structures are reversible. In the molten state or solution state, the intermolecular forces weaken, but after cooling or the solvent evaporates, strong intermolecular forces connect them together to restore the original solid properties.
