According to our (Global Info Research) latest study, the global POM Resins market size was valued at USD 4924.2 million in 2023 and is forecast to a readjusted size of USD 7173.6 million by 2030 with a CAGR of 5.5% during review period.

POM (Polyacetal) resins, also known as acetal or polyoxymethylene resins, are important engineering resins with exceptional wear resistance and excellent chemical, thermal, electrical, and mechanical properties; as a result, they have replaced metals and other plastics in wear-critical applications. While one of the oldest engineering thermoplastics, polyacetal resins continue to be successful substitutes in traditional metal markets, at costs that are lower than those of many other engineering thermoplastics. Polyacetal resins continue to replace die-cast zinc, brass, aluminum, steel, and other metals in various end-use applications.

Global POM resins positioning chips key players include DuPont, Polyplastics and Celanese. Global top three manufacturers hold a share about 40%. In terms of product, copolymer type is the largest segment of POM resins in the world, which accounts for about 83% market share. And in the terms of application, electronics is the largest segment of application, which accounts for about 41% market share.
