The pond digging and film laying machine is an agricultural machine that integrates the functions of automatic pond digging (digging ponds), laying ground film, and covering soil and pressing film. It is mainly used in the land preparation process before row and ridge operations in the planting process of crops such as potatoes and sugarcane. The equipment can complete pond digging and ground film covering in one go, significantly improving work efficiency, reducing labor input, and at the same time improving crop emergence rate and drought resistance and moisture conservation effects. It is suitable for large and medium-sized planting bases and agricultural mechanized operation areas.
