## Abstracts

According to our (Global Info Research) latest study, the global Pool Chemical market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A pool's filter system does the work to keeping the water clean, but it takes chemistry to do the fine-tuning. It's important to carefully manipulate the chemical balance in pools for several reasons. One reason is that pathogens, such as bacteria, thrive in water. A pool filled with untreated water would be a perfect place for disease-carrying microorganisms to move from one person to another. Also, water with the wrong chemical balance can damage the various parts of the pool. In addition, improperly balanced water can irritate the skin and eyes. Improperly balanced water can also get very cloudy.

In United States, Pool Chemical key players include Lonza, FMC, NC Brands, Haviland Pool, Occidental Chemical, etc. United States top five manufacturers hold a share over 40%. The Middle Atlantic is the largest market, with a share over 20%.

In terms of product, Trichlor is the largest segment, with a share over 40%. And in terms of application, the largest application is Residential pool, followed by Commercial pool.
