Abstracts

The global Pool Ozone Disinfection and Purification Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Asia-Pacific: The Asia-Pacific region, including countries like China, India, and Japan, has a large population and a high prevalence of neonatal jaundice. The market for baby phototherapy machines in this region is witnessing significant growth due to improving healthcare infrastructure, increasing awareness about neonatal care, and rising disposable incomes. Portable and cost-effective solutions are particularly sought after in resource-constrained settings.

A baby phototherapy machine, also known as a neonatal phototherapy unit or phototherapy lamp, is a medical device used to treat newborn babies with jaundice. Jaundice is a common condition in newborns that occurs when there is an excess of bilirubin in the blood, resulting in a yellowing of the skin and eyes. The baby phototherapy machine works by emitting a specific wavelength of light, typically blue or green, which helps to break down the bilirubin in the baby's body into a form that can be easily eliminated through urine and stool. The light is directed towards the baby's skin, either through a canopy or fiber-optic pads, allowing the skin to be exposed to the therapeutic light.
