## Abstracts

According to our (Global Info Research) latest study, the global Pop up Satellite Archival Tag market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Pop Up Satellite Archival Tag (PSAT) is a small electronic device used in marine research to collect and transmit data from marine animals. The PSAT is typically attached to the animal, such as a fish or marine mammal, and is designed to detach itself after a pre-programmed amount of time. The tag collects various types of data, including depth, temperature, light levels, and sometimes even GPS location. Once the tag detaches, it floats to the surface of the water where it transmits the stored data via satellite to researchers. This data provides valuable insights into the behavior, movements, and environmental conditions experienced by the tagged animal, aiding in the study of their ecology, migration patterns, and response to changing ocean conditions.
