The global Pop up Satellite Archival Tag market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pop Up Satellite Archival Tag (PSAT) is a small electronic device used in marine research to collect and transmit data from marine animals. The PSAT is typically attached to the animal, such as a fish or marine mammal, and is designed to detach itself after a pre-programmed amount of time. The tag collects various types of data, including depth, temperature, light levels, and sometimes even GPS location. Once the tag detaches, it floats to the surface of the water where it transmits the stored data via satellite to researchers. This data provides valuable insights into the behavior, movements, and environmental conditions experienced by the tagged animal, aiding in the study of their ecology, migration patterns, and response to changing ocean conditions.

This report studies the global Pop up Satellite Archival Tag production, demand, key manufacturers, and key regions.
