Porcine epidemic diarrhea virus (PEDV) is the causative agent of porcine epidemic diarrhea (PED), an acute and highly contagious enteric viral disease.

Porcine vaccines play a crucial role in preventing and controlling various viral, bacterial, and parasitic diseases in pigs. The market is driven by factors such as the growth of the swine industry, rising awareness about the benefits of vaccination, and the implementation of stringent animal health regulations. Additionally, advancements in vaccine technology, such as the development of more efficacious and safer vaccines, are fueling market growth. However, challenges such as high costs associated with vaccine development and production, and the presence of counterfeit vaccines in some regions, may hamper market growth. With the continuous focus on disease prevention and the need to ensure a healthy pig population, the porcine vaccines market is expected to witness sustained growth in the coming years.
