According to our (Global Info Research) latest study, the global Porcine Reproductive Respiratory Syndrome (PRRS) Vaccines market size was valued at USD 373.5 million in 2023 and is forecast to a readjusted size of USD 716.9 million by 2030 with a CAGR of 9.8% during review period.

There are commercial vaccines available containing either a live modified PRRS virus or a dead PRRS virus, both of which are used to increase the immunity to these strains of the infection. These vaccines are licensed in both breeding or growing pigs.

Porcine vaccines play a crucial role in preventing and controlling various viral, bacterial, and parasitic diseases in pigs. The market is driven by factors such as the growth of the swine industry, rising awareness about the benefits of vaccination, and the implementation of stringent animal health regulations. Additionally, advancements in vaccine technology, such as the development of more efficacious and safer vaccines, are fueling market growth. However, challenges such as high costs associated with vaccine development and production, and the presence of counterfeit vaccines in some regions, may hamper market growth. With the continuous focus on disease prevention and the need to ensure a healthy pig population, the porcine vaccines market is expected to witness sustained growth in the coming years.
