According to our (Global Info Research) latest study, the global Porcine Vaccines market size was valued at USD 1383.9 million in 2023 and is forecast to a readjusted size of USD 2111.4 million by 2030 with a CAGR of 6.2% during review period.

Vaccines can either contain viable organisms that will multiply in the pig, or inactivated ones that will not multiply in the pig.

The porcine vaccines market is experiencing steady growth due to the increasing demand for improved animal health and the rising prevalence of swine diseases. Porcine vaccines play a crucial role in preventing and controlling various viral, bacterial, and parasitic diseases in pigs. The market is driven by factors such as the growth of the swine industry, rising awareness about the benefits of vaccination, and the implementation of stringent animal health regulations. Additionally, advancements in vaccine technology, such as the development of more efficacious and safer vaccines, are fueling market growth. However, challenges such as high costs associated with vaccine development and production, and the presence of counterfeit vaccines in some regions, may hamper market growth. With the continuous focus on disease prevention and the need to ensure a healthy pig population, the porcine vaccines market is expected to witness sustained growth in the coming years.
