## Abstracts

The global Porous Carbon Nano Powders market size is expected to reach \$ 4714 million by 2032, rising at a market growth of 18.6% CAGR during the forecast period (2026-2032).

Porous Carbon Nano Powders are finely structured carbon materials with nanoscale pore networks and extremely high specific surface area, designed to enhance ion diffusion and electrochemical reaction efficiency in advanced energy storage systems. Produced through controlled carbonization and activation processes, these powders provide stable porous frameworks, excellent electrical conductivity, and strong adsorption capability, making them suitable for high-performance battery applications. Their advantages include large surface area, enhanced electrochemical activity, and improved energy storage efficiency. The capacity utilization rate in 2025 reached 80%, and the industry's average gross margin was approximately 28%. In 2025, production was 36,585 tons at an average price of 41,000 USD per ton. The upstream segment mainly consists of coconut shells and pitch, with representative suppliers including Olam Group, Cargill, Baowu Carbon Materials, and Sinopec. The midstream focuses on carbonization, activation, pore structure regulation, nanoscale grinding, and purification technologies to ensure stable pore distribution and electrochemical performance. Downstream applications are primarily in consumer batteries and power batteries, with key customers including Panasonic, Samsung SDI, CATL, BYD, and LG Energy Solution.
