Portable Active Air Microbial Samplers are devices used to collect microorganisms (such as bacteria, fungi, viruses, etc.) in the air. It can help people monitor and analyze the microbial load in the air to assess environmental health conditions, indoor air quality and risk control.

These portable samplers typically have a small, lightweight design that makes them easy to carry and operate. They actively inhale the surrounding air and deposit airborne microorganisms on culture media or other sampling media for subsequent microbiological analysis. Some portable microbial air samplers can also adjust sampling flow and timing as needed to meet specific application needs.

Currently, the key models of Portable Active Air Microbial Samplers include Merck's MAS-100, etc.
