The global Portable Air Ozonator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Portable Air Ozonator is a device that generates ozone, a molecule consisting of three oxygen atoms, which is used to purify air. The ozone produced by the ozonator reacts with pollutants and other contaminants in the air, oxidizing them and breaking them down into harmless substances. This process effectively eliminates odors, bacteria, viruses, and other harmful particles from the air.

Portable Air Ozonators are commonly used in homes, offices, and other indoor spaces to improve air quality and reduce the risk of illness. They are also used in industrial settings to purify air and water.
