According to our (Global Info Research) latest study, the global Portable Blood Glucose Sensor market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A glucose sensor is the part of a continuous glucose monitoring (CGM) system that is inserted under the skin and measures your glucose (sugar) levels. The sensor measures the level of glucose in the interstitial fluid (fluid surrounding the cell) every 10 seconds and changes it into an electrical signal. The signal represents the amount of sugar in the blood. A small transmitter attaches to the sensor.
